## 00.010.09-MASTER DATA REFERENCES

### PROCESS OVERVIEW

---

Master data reference is used to check the presence of the base master data in other referencing master table or transaction table data. It also shows the number of records present in the referencing transaction table. With the help of this, we can take decision to update, change or delete the master record if required. It also shows the table name and column name which carry these master data records.

### PROCESS PRE-REQUISITES

---

Input Fields	Input Details	General Remarks
Master	Master required	We select the master in this form.
User Rights	User rights are required to use this form.	Please refer Object Help Document of Assign Rights To User for more details.

### KEY FEATURES

---

- We check the number of transaction which carries master data.
  - In this form we export data to excel.
  - We can filter the data code wise and also we use many different types of filter.
-
