Item Related Master

Key Feature

An item master is a record that lists key information about an inventory item. This information may include the description, unit of measure, weight, dimensions, ordering quantity, and so forth for an item. An item master is used as an information source for a variety of purchasing and production planning activities.

The inventory Items may be finished products, raw materials, components, sub-assemblies, packing materials or options/accessories however Items may also be things like services and special charges.
